MORE DETAILS COMING SOON - You can also check out our FAQs

Welcome to JFPICS.com - JFP Internet Consulting Services.

We specialize in CMS (Content Management Systems) based solutions and converting existing static websites (non database driven. i.e.: standard html pages created via with Microsoft FrontPage, Dreamweaver, etc...) into a fully dynamic website with PHP and MySQL in which the content can be easily updated by you or anyone else in your organization via a simple browser like Internet Explorer, Firefox, etc.. in an easy to understand and friendly GUI (Graphical User Interface) thus saving you money by reducing the need for a webmaster for simple changes to content.

If you are looking for an affordable and RELIABLE hosting solution and/or want to implement a database driven CMS solution that will let you update your corporate or personal website through a simple browser like Microsoft's Internet Explorer, Firefox, Opera, etc.. by anyone in your organization that has some basic knowledge of text editors (WYSIWYG editors like Word) you're in the right place. If you are looking for a \$3 / month hosting package with 15 Gig of space and 50 Gig of bandwidth per month, you're in the wrong place. We do not over populate our servers.

With 25 years of computer experience (PC, Mac, Linux), 10 years in telecommunications and over 10 years of Internet experience you can be sure JFPICS.com will do everything possible to create a dynamic website that is easy to update and/or a hosting solution that is functional, affordable and reliable.
